Java

```java
package q10815;

class PrimitiveTypes {
    static byte m;
    static short l;
    static int s;
    static long a;
    static boolean b;
    static double d;
    static float f;

    public static void main(String[] args) {
        System.out.println("byte default value = " + m);
        System.out.println("short default value = " + l);
        System.out.println("int default value = " + s);
        System.out.println("long default value = " + a);
        System.out.println("boolean default value = " + b);
        System.out.println("double default value = " + d);
        System.out.println("float default value = " + f);
    }
}

```
